

Check Fraud Stops Here. Automatically.

Rynoh PosPay pulls check data directly from Sage Intacct, builds custom bank-specific files, and automatically transmits them straight to your bank on any check run or one-off check. No bank login, no manual steps, no file downloads or uploads. Full coverage, automatically.

configs

WHAT IS POSITIVE PAY?

Positive Pay is a bank fraud-prevention service that matches checks you've issued against checks presented for payment. When there's a discrepancy, your bank flags it before funds leave your account.

WHAT MAKES RYNOH DIFFERENT?

Most solutions require someone to log in, generate a file, and manually upload it to a bank portal on every check run. Rynoh eliminates all of it. Once configured, the system runs entirely in the background.

HOW IT WORKS

1 Connect

Rynoh integrates directly with Sage Intacct and reads your AP check data in real time.

2 Generate

Bank-specific Positive Pay files are created automatically on your check-run schedule.

3 Transmit

Files go directly to your bank. No portal logins. No manual uploads. No one to remind.

4 Confirm

Every transmission is logged with timestamps. Alerts fire instantly if anything fails.

RYNOH PosPay VS. OTHER SOLUTIONS

	✓ Rynoh PosPay	Other Solutions
Automation	✓ Fully automated end-to-end. Runs silently in the background after a one-time setup.	✗ Requires manual login, file generation, and bank portal upload — every check run.
Ad Hoc Checks	✓ Automatically captured and transmitted. No action needed from your team.	✗ User must remember to manually trigger a separate process for each ad hoc check.
Bank Connectivity	✓ Thousands of prebuilt integrations spanning national, regional, and local banks.	✗ Limited primarily to major national banks. Regional and local banks require custom setup.
Implementation	✓ Prebuilt bank configurations. Operational in hours, not weeks.	✗ Custom bank format configuration required. Longer deployment timelines.
Fraud Detection Layers	✓ Positive Pay validation + daily reconciliation + 24/7 exception monitoring.	✗ File matching only. Fraud outside of check matching goes undetected.
Audit & Compliance	✓ Check-level logging with user-attributed timestamps. Full searchable history.	✗ Limited internal history. Restricted compliance and reporting capability.
